

Iacobucci HF, world leader in aero technology appliances, introduces its innovative built-in system for luxury yachts at 50th International Boat Show of Genoa.

Building on its engineering aerospace know-how, quality craftsmanship and proprietary technologies, Iacobucci HF, the worldwide leader in manufacturing espresso machines and hi-tech appliances for most exclusive airlines and business jets, presents the new built-in system specifically designed and crafted for the luxury yacht market: **W|System**, a built-in trash compactor, designed to provide top class quality and functionality on board the most sophisticated yachts.

Thanks to its continuous search for innovation and for space-saving solutions, typical of aeronautical business, Iacobucci HF, also presents the innovative **W|System**, the smallest waste solution which can be easily installed on board a yacht. The W|System is the first built-in waste compacting system designed to optimize the use of space on board, reducing the volumes of extra waste and keeping it stored safely and tidily. Applying the most advanced aero technologies, the W|System combines two tons of compacting force with low-level power consumption. The electro-mechanical principle of action and the use of specific water-proof carton boxes, enable the W|System to compact in a safe and hygienic box paper, plastic, aluminium, glass and even champagne bottles. Perfectly in line with an eco-sustainable philosophy the boxes are made of 100% recyclable material and are predisposed for a differentiated collecting of waste, contributing to environmental protection.

W|System, have been installed on board of Canados Open 90 exposed at 50th International Boat Show of Genoa, 2-10 october.

W 302mm | H 635mm | D 499.5 | 39 kg Box W 210mm | H 285 mm | D 370 mm
CONNECTION 28 Vdc/220 VAC or 115 VAC with external power supply | CONSUMPTION 300W
